Math 1070Q — Mathematics for Business and Economics (Spring 2017)

Home | Outline | Homework | Exam Info | Instructors

Description:

Linear equations and inequalities, exponents and logarithms, matrices and determinants, linear programming. Applications.

Prerequisites:

Recommended preparation: MATH 1010 or the equivalent.

Sections:

There are several sections for this course.

Discussion Sections 011D-022D: Lectures in person taught by **Professor Benjamin Russo.**

Discussion Sections 031D-042D: Lectures in person taught by **Professor Anthony Rizzie.**

Students are also required to attend a discussion section that meets once per week.

Required Textbook:

Applied Finite Mathematics by Edmond C. Tomastik and Janice L. Epstein (1st Edition)

You can purchase the bundled version of Applied Finite Mathematics with a Webassign code from the UConn Bookstore or directly from the publisher's website. Click here for a direct link. Alternatively, you may also purchase a WebAssign access code directly from WebAssign and obtain a copy of the text elsewhere.

i>clicker Registration:

Clickers will be used in the lectures. **You must register your i>clicker** by visiting the link through the lecture section of your instructor in HuskyCT. This only needs to be done once for any class, but if you do not register your clicker, you will not be able to receive credit for your responses!

It is your responsibility to register your clicker properly and use the correct frequency for your classroom. Failure to do so will cost you points for any questions that you miss, and there will be no opportunity to make up these points. 5% of your grade is not much overall and the points are easy to earn, but this can make the difference between a B and an A-, for example.

Homework and WebAssign:

WebAssign: Online homework and MATH 1070 are assigned and completed using WebAssign. **WebAssign must be accessed through HuskyCT**. To get to WebAssign, go to the HuskyCT site for your discussion section (not your lecture section), and click the link on the left navigation menu which says "WebAssign Homework". This will take you directly to the WebAssign homework assigned for your class.You will usually have 5 attempts to answer each non-multiple choice question. For multiple choice questions the number of attempts will vary based on the content. After each attempt, you will be told whether your answer is correct or not. If you are not able to get the correct answer after a couple attempts, come talk to your professor or TA. We're here to help! You might also find some help at the Q-Center.

Homework: There will be homework assignments for each section of the text in WebAssign. These will be due at the end of the week that the material has been covered on Sunday nights at 11:59 PM. Be sure to start the assignments early so that you can ask questions.

In-Class Quizzes: Short, weekly in-class quizzes will be given in discussion sections on material covered during the previous week.

Late Work Policy: Homework extensions will not be granted, and there will be no makeup quizzes, except for in extenuating circumstances. However, at least one homework and quiz score will be dropped at the end of the semester to accommodate any issues that may arise. It is important that you manage your time effectively to complete the homework before it is due and attend discussion to take quizzes when they are given. Choosing not to do either is up to you, but there will not be any opportunities to recover missed points.

Calculator Policy:

A scientific calculator is allowed and recommended for quizzes and exams. You may not use a graphing calculator (TI-84, TI-Nspire, etc) on quizzes or exams, but these devices can be helpful while doing the homework and practicing the concepts. However, keep in mind that you will not be able to use them on quizzes or exams, so make sure to learn how to use the functions on a scientific calculator as well. Sharing of calculators will not be permitted, so make sure to have your own if you want one.

Grading:

Online Homework	Webassign	10%
In-Class Quizzes	Discussion	10%
Clicker Questions	Lecture	5%
Exam 1: (Feb 23)	Lecture	25%
Exam 2: (Apr 6)	Lecture	25%
Final Exam: (Date TBA)	Common exam	25%

Exam 1 is scheduled for Thursday, February 23, and Exam 2 is scheduled for Thursday, April 6. The exams will be given in lecture and will be multiple choice format. You must show work or explain your thought process on each question to receive credit.

The final exam will be scheduled by the Registrar at some point during the semester.

Note: If you think a mistake has been made in grading or in recording any grades in Webassign, please bring this to your instructor's attention as soon as possible. All grades must be corrected and updated before the final exam is administered; no changes will be made after that time.

Math Courses

Math 1070 Outline (Spring 2017)

Tentative Outline

Week	Section	Topic
1	4.1	Introduction to Sets
	4.2	The Number of Elements in a Set
2	4.3	Sample Spaces and Events
	4.4	Basics of Probability
3	5.1	The Multiplication Principle and Permutations
	5.2	Combinations
4	4.5	Rules for Probability
	4.6	Conditional Probability
	4.7	Bayes' Theorem
5	5.3	Probability Applications of Counting Principles
	5.4	Bernoulli Trials
6		**Review, Exam I (February 23)**
7	6.1	Random Variables and Histograms
	6.2	Measure of Central Tendency
	6.3	Measure of Spread
	6.4	The Normal Distribution
8	F1	Simple Interest
	F2	Compound Interest
	F3	Annuities
9		**Spring Break (March 11-19)**
10	F4	Present Value of Annuities and Amortization
	N/A	Examples with Mortgages and Student Loans
11	1.1	Mathematical Models
	1.2	Systems of Linear Equations
12		**Review, Exam II (April 6)**
13	3.1	Linear Programming Problems
	3.2	Graphing Linear Inequalities
14	3.3	Graphical Solutions of Linear Programming Problems
	2.1	Introduction to Matrices
	2.2	Matrix Multiplication
15	1.3	Gauss Elimination for system of Linear Equations
	1.4	System of Equations with Non-Unique Solutions
		Final Exam: Date and Time TBD
